NRA OFFERS ELECTRONIC SAFE DEPOSIT BOX “NRAe-Safe” FOR SAFETY AND SECURITY

Los Angeles, California (June 1, 2009) – MMR Information Systems, Inc. (OTC Bulletin Board: MMRF.OB), which through its wholly-owned operating subsidiary, MyMedicalRecords, Inc. (collectively, “MMR”) provides consumer-controlled Personal Health Records (“PHRs”) (www.mymedicalrecords.com) and electronic safe deposit box storage solutions (www.myesafedepositbox.com), today announced it has entered into an affinity marketing program with the National Rifle Association (NRA). The NRA will offer MMR’s MyEsafeDepositBox platform to its members to ensure that its members have secure access to their important documents in the event of an emergency or disaster. The service, called NRAe-Safe, is being offered as a complimentary benefit to new and renewing members of the NRA for one year starting in the second quarter of 2009.

“The relationship with the NRA continues to validate our strategy of marketing our easy-to-use, consumer-centric products on a private label basis through membership organizations, including trade and professional associations, hospitals, unions, insurance companies, financial institutions and other member benefit organizations,” said Robert H. Lorsch, Chairman and CEO of MMR Information Systems, Inc. “The NRAe-Safe service is powered by MMR’s patent-pending technologies to create a user-friendly system for members to manage all their important papers in one secure online location that they can access 24/7, using any Internet-connected device. The series of disasters across America over the past decade where hundreds of thousands of people had to evacuate their homes due to hurricanes, floods, tornadoes and wildfires illustrates the need for NRAe-Safe, where documents such as insurance policies, deeds of trust, legal permits, birth and marriage certificates, photos of family, property and pets, and, also importantly, personal health records, are always in safekeeping.”

“NRAe-Safe is a powerful emergency-preparedness tool that offers a needed layer of protection to our members and their families,” said Wayne LaPierre, Executive Vice President of the National Rifle Association. “Being able to store copies of all of one’s financial, legal and medical documents in one secure place and retrieve these at any time gives members greater control over their lives so that in the event of loss or theft, or a natural disaster, maintaining an NRAe-Safe account can help reconstruct a family’s life and facilitate the insurance claims process and reduce recovery time.”

NRAe-Safe will enable members to have paper records faxed directly into their secure password-protected account through a unique, personal “Lifeline” telephone number where they can be digitally stored, shared and displayed online. Scanned files and images can also be easily uploaded into the account from an Internet-connected computer. The service provides members the capability to organize the records into customizable folders, and information deemed extremely sensitive can be secured by secondary passwords. In addition, the system accommodates the storage of audio files which are also password-protected. All information in the member’s account is completely controlled by the member without any third party intervention to ensure privacy and confidentiality.

In addition, the service features a proprietary Emergency Login that gives medical personnel and first responders immediate online access to personal health records to display critical medical information that the member pre-selects in the event of an emergency or crisis situation. It also offers a suite of health management tools for up to 10 family members, such as automatic prescription reminders, appointment scheduling and an interactive drug

reference tool that checks for interactions between over 24,000 prescription and over-the-counter medications, potentially preventing one of the leading causes of medical errors and deaths in the U.S.

“We are proud that the NRA will offer MMR’s private label records storage system,” said Lorsch. “Such membership marketing programs are a key part of MMR’s business strategy as we respond to the need to provide meaningful, cost-saving products that provide value to an organization’s employees and members.”

About the National Rifle Association

Established in 1871, the National Rifle Association is America’s oldest civil rights and sportsmen's group. Four million members strong, NRA continues its mission to uphold Second Amendment rights and to advocate enforcement of existing laws against violent offenders to reduce crime. The Association remains the nation's leader in firearm education and training for law-abiding gun owners, law enforcement and the military.

About MMR Information Systems, Inc.

MMR Information Systems, Inc. (formerly Favril, Inc.), through its wholly-owned operating subsidiary, MyMedicalRecords, Inc. (collectively, “MMR”) provides secure and easy-to-use online Personal Health Records (“PHRs”) and electronic safe deposit box storage solutions, serving consumers, healthcare professionals, employers, insurance companies, unions and professional organizations. Seeking to empower individuals and their families to have greater control over their health and well-being, MMR facilitates access to medical records and other important documents, such as living wills, birth certificates, passports, advance directives and insurance policies, anytime from anywhere using the Internet. MMR’s principal product, the MyMedicalRecords PHR service, accessed through www.mymedicalrecords.com, is built on proprietary patent-pending technology that enables users to transmit documents, images and voicemail messages in and out of the MyMedicalRecords PHR system using a variety of methods, including fax, phone, and file upload without relying on any specific electronic medical record platform to populate a user's account. Users and medical providers can fax paper records (such as laboratory tests, radiology reports and physician's notes), or scanned images can be uploaded, into a secured personal account, which the user can access and organize as necessary, including filing particularly sensitive documents in virtual lockboxes protected by secondary passwords, and designating certain records as accessible to medical personnel and first responders by way of a separate Emergency Login. MyMedicalRecords PHR also includes the Cerner Multum Drug Content database, licensed to MMR from Cerner Corp. (Nasdaq: CERN). MMR also offers its MyEsafeDepositBox service, available at www.myesafedepositbox.com, which is designed to provide secure online storage for vital financial, legal and insurance documents in addition to medical records using the same patent-pending technologies that drive the MyMedicalRecords PHR service. In its final stages of development, MMR's MyMedicalRecords Pro service is designed to give physician's offices a cost-effective solution to the costly and time-consuming problem of digitizing paper-based medical records. MMR clients include AFL-CIO, Alexian Brothers Hospital Network, Coverdell, LegalZoom, MedicAlert, Midwest Research Institute, Qvisory, XN Financial and others. MMR is also one of the integrated service providers that launched on Google Health. Additional information regarding MMR’s business and its products, including trial accounts, is available at www.mymedicalrecords.com. Information on MMR’s Web sites is not incorporated by reference into this press release.
